ARSMATERIA

XL Minifig Display

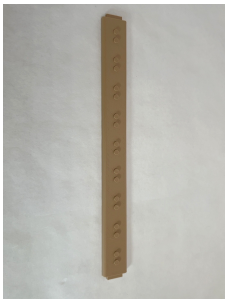

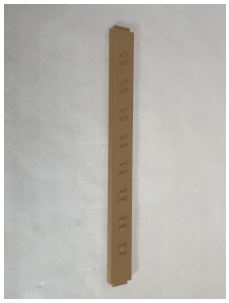

Printable Build Guide | Holds up to 77 standard minifigures

1. Check Your Parts

YOUR PACKAGE SHOULD CONTAIN 12 PIECES: 5× A Rails · 4× B Rails · 1× Left Support · 1× Right Support · 1× Center Support

A vs. B — Why They Alternate

		**Look for the A and B labels.** The rails use different minifigure mounting-position patterns. Alternating them offsets each row to create the staggered layout and helps keep figures visible.
A Rail — Qty. 5	**B Rail** — Qty. 4	**Install in this order:** **A – B – A – B – A – B – A – B – A**

2. Snap All 9 Rails Into the First End Support

Lay either End Support flat. Starting at one end, snap the rails into the support one at a time in the alternating sequence shown below.

A – B – A – B – A – B – A – B – A

TIP: Fully seat all nine rails in the first support before adding the opposite end. This is much easier than trying to align both supports at once.

3. Attach the Opposite End Support

Place the second End Support over the loose ends of the nine rails. Align one rail with its slot, snap it into place, then move to the next rail. Continue one at a time until all nine rails are locked in.

DO NOT force all nine rails in at once. Working one rail at a time keeps the tabs aligned and reduces stress on the printed parts.

4. Add the Center Support

Turn the display so the nine rectangular center openings are accessible. Align the Center Support with those openings and snap each rail connection into place one at a time. The Center Support is installed last and braces the full width of the display.

5. Final Check

Set the display upright on a flat surface. Confirm that every rail is fully seated in the Left Support, Right Support, and Center Support. The display should sit square and stable without rocking.

FINAL CHECK: All 27 rail-to-support connections should be fully seated before adding your collection.

BUILD COMPLETE

Add your collection and make it yours.

77 MINIFIG POSITIONS | 9 STAGGERED TIERS
